Defect Report

Social Media Web Application

Application	Social Media Web Application	**Version**	v1.0
Environment	Windows 11, Microsoft Edge (latest), Test Server	**Report Date**	07-Oct-2026
Reported By	QA Tester	**Total Defects**	5

Severity Summary

Severity	Count
Critical	1
Major	3
Minor	1
Total	**5**

Defect List

Defect ID	Title	Module	Severity	Priority	Status
DEF-001	Like count does not update after liking a post	Interaction (Like)	Major	High	Open
DEF-002	Protected page remains accessible after logout	Logout / Session Management	Critical	High	Open
DEF-003	Weak password is accepted during registration	Registration	Major	High	Open
DEF-004	Empty post can be published	Post	Minor	Medium	Open
DEF-005	Unsupported file type accepted as profile picture	Profile	Major	Medium	Open

Defect Details

DEF-001: Like count does not update after liking a post			
Module	Interaction (Like)	**Test Case Ref**	TC029
Severity	**Major**	**Priority**	High
Status	Open	**Reported On**	07-Oct-2026
Description	When a logged-in user clicks the Like button on a post, the like icon changes but the displayed like count stays the same until the page is refreshed.		
Steps to Reproduce	1. Login with a valid user account. 2. Open the home feed and select any post. 3. Note the current like count. 4. Click the Like button on the post.		
Expected Result	Like count increases by 1 immediately and the icon changes to the liked state.		
Actual Result	The icon changes to the liked state but the like count remains unchanged. The count updates only after a manual page refresh.		
Impact	Users get wrong feedback about their action, which affects trust in the application and engagement statistics shown on the post.		

DEF-002: Protected page remains accessible after logout			
Module	Logout / Session Management	**Test Case Ref**	TC050
Severity	**Critical**	**Priority**	High
Status	Open	**Reported On**	07-Oct-2026
Description	After a user logs out, the protected pages (home feed, profile) can still be opened using the browser Back button. The session is not invalidated properly and the page is served from the browser cache.		
Steps to Reproduce	1. Login with a valid user account. 2. Open the home feed. 3. Click Logout from the profile menu. 4. Click the browser Back button.		
Expected Result	Protected pages are not accessible after logout and the user is redirected to the login page.		
Actual Result	The previously opened protected page is displayed with the user's data, and actions on the page may still work.		
Impact	Security risk. On a shared computer, another person can view the previous user's account data after logout.		

DEF-003: Weak password is accepted during registration

Module	Registration	**Test Case Ref**	TC005
Severity	**Major**	**Priority**	High
Status	Open	**Reported On**	07-Oct-2026

Description	The sign-up form does not enforce any password strength rules. A very short and simple password is accepted and the account is created.
Steps to Reproduce	1. Open the sign-up page. 2. Enter a valid name and a new email address. 3. Enter the password 123 in the password and confirm password fields. 4. Click Sign Up.
Expected Result	A password strength error is displayed and the account is not created until a strong password is entered.
Actual Result	The account is created successfully with the password 123 and no warning is shown.
Impact	User accounts can be easily guessed or hacked, which increases the risk of account takeover.

DEF-004: Empty post can be published

Module	Post	**Test Case Ref**	TC022
Severity	**Minor**	**Priority**	Medium
Status	Open	**Reported On**	07-Oct-2026

Description	The Create Post form allows a post to be submitted with no text, image or video. A blank post is added to the feed.
Steps to Reproduce	1. Login with a valid user account. 2. Click Create Post. 3. Leave the text box empty and do not attach any media. 4. Click Post.
Expected Result	The Post button is disabled or an error message is displayed asking the user to add content.
Actual Result	A blank post is published and appears at the top of the feed and on the user's profile.
Impact	Clutters the feed and gives a poor user experience. It can also be misused for spam.

DEF-005: Unsupported file type accepted as profile picture			
Module	Profile	**Test Case Ref**	TC016
Severity	**Major**	**Priority**	Medium
Status	Open	**Reported On**	07-Oct-2026
Description	The profile picture upload does not validate the file type. An executable file (.exe) can be uploaded and saved as the profile picture.		
Steps to Reproduce	1. Login with a valid user account. 2. Open Profile and click Edit. 3. Choose the file setup.exe as the profile picture. 4. Click Save.		
Expected Result	An error message about the unsupported file type is displayed and the file is not uploaded. Only JPG and PNG files should be accepted.		
Actual Result	The file is uploaded and saved with no error. The profile picture shows as a broken image.		
Impact	Security risk because harmful files can be stored on the server, and the profile shows a broken image.
